C Profile

Being the most recent addition to the range C profile incorporates all the features of T and D profile plus the unique roll together effect achieved by its proven design. This manages to actually help reduce nicks on the die by increasing sheet strength and in turn aid higher press speeds.

Red Soft-C Rubba

Utilising the advanced shape of the standard 60 shore C the soft version is aimed at corrugated board where its 25 shore body will not crush fluting and for the first time corrugated die-cutters will be able to experience the benefits of the 'roll together' the c profile offers.

Red Soft-T Rubba

Most people would agree that sponge rubber deteriorates quickly on hot/dry high speed presses and soon loses its effectiveness. However Soft-T due to its unique structure does not and is most suitable where extended ejector life is needed for continuous use.
